PROFESSIONAL SUMMARY

Result-driven Java Spring Developer with expertise in designing, implementing, scaling and maintaining large scale web applications capable of handling millions of transactions, leveraging SQL and NoSQL databases as per requirement of the project. In depth knowledge developing Event driven systems using Kafka and message brokers to process huge loads of data with least latency and in developing Rest API with minimum latency.

SKILLS

Java	SQL, NoSQL	Multithreading	OpenID	AWS ECS
Spring Boot	GraphQL	Kafka	ELK	Design Patterns
Microservices	JUnit	ActiveMq	CI/CD	
OOPs	Maven	Postman	Jenkins	
REST	Docker	Oauth2	Git	

WORK EXPERIENCE

Senior Software Engineer: Accenture Technology Services (Roche)

Sept 2024 – Present

- Hi
- Hello
-

System Engineer: Tata Consultancy Services (Citi Bank)

June 2023 – Sept 2024

- Worked as a lead Developer to develop, design microservices.
- Demonstrated expertise in Spring Boot microservices development from scratch, showcasing proficiency in developing modular, scalable, and maintainable microservice solutions.
- Designed and implemented Code following Design patterns to promote good practices and best performance.
- Designed and structured MongoDB (NoSQL) collections to accommodate diverse data types, enabling flexible and schema-less storage.
- Utilized ELK tech stack to enable distributed log tracing for the developed microservices
- Secured backend microservices using Oauth2 and openId connect protocol.
- Effectively administered the orchestration and scaling of application pods on the Openshift Container Platform cloud environment (kubernetes).

- Orchestrated the deployment of microservices using containerization technologies like Docker, enabling consistent deployment across various environments on AWS ECS cluster using Jenkins.
- Assembled tools like Swagger/OpenAPI to auto-generate API documentation, enhancing transparency to other developers and stakeholders.

Software Engineer: Capgemini Technology Services (DBS Bank).

July 2021 - June 2023

- Built REST APIs to enhance communication and interaction between components.
- Used GraphQL to enable easy data access by the client application and reduce bandwidth usage.
- Developed event consumers/producers within microservices, enabling real-time data processing and accurate state updates based on received events from Kafka topics.
- Reduced backend API response time by 50 percent resulting in better user experience.
- Created and deployed new Microservices, augmenting system capabilities and flexibility.
- Demonstrated a 40% reduction in recurring bugs through targeted enhancements.
- Devised Event-Driven Systems to optimize responsiveness and real-time data processing.
- Added Comprehensive unit tests and integration tests, ensuring the reliability and correctness of microservice components and their interactions
- Code reviews with peers and seniors.
- Experienced in Developing, Testing, and debugging applications.
- Utilized Jenkins as the continuous integration and continuous deployment (CI/CD) tool to automate the build, test, and deployment of application JAR files.

Software Engineer Intern: Capgemini Technology Services

March 2021 - June 2021

This project is aimed at developing a web App for the Client to order Medicines to the easiest way of finding and putting the items into their carts. Used Angular 7 as the frontend and RestApi using Spring Framework in Java.

PERSONAL PROJECTS

Mock Twitter Web App: Developed a Twitter mock application based on CQRS pattern to ease scalability of the application.

- Used Apache Kafka as an event store to establish the event driven nature of the application.
- Adopted Elastic search db to persist the generated tweets and query the tweets as and when required
- Devised spring reactive to develop microservices in order to achieve asynchronous behavior while querying for huge data and prevent application slowness.
- Secured microservices using OAuth2 protocol with keycloak as an authorization server.
